

# Real-Time & Embedded Systems 2019

## Summary

Uwe R. Zimmer - The Australian National University

# Introduction & Real-Time Languages

- **Features (and non-features) of a real-time system**
  - Features, definitions, scenarios, and characteristics.

## Components of a real-time system

- Converters, interfaces, sensors, actuators, communication systems, controllers, ...

## Software layers of a real-time system

- Algorithms, operating systems, protocols, languages, concurrent and distributed systems.
- Mostly high integrity, predictable languages with means for explicit time scopes.
- Examples of actual real-time languages

## Table of Contents

<b>1. Introduction &amp; Real-Time Languages</b>	<ul style="list-style-type: none"> <li>• Simple 8-bit Icontroller example</li> <li>• Complex 32-bit Icontroller example: FPU, interrupting atomic states, race conditions, priority inheritance, priority ceiling protocols</li> </ul>
1.1. Features (and non-features)	<ul style="list-style-type: none"> <li>• Asynchronous transfer of control</li> <li>• Interrupts in context</li> <li>• Interrups and ACI in real-time Java and Ada</li> </ul>
1.2. Components of a Real-time System	<ul style="list-style-type: none"> <li>• General device handling, sampling and language requirements</li> </ul>
1.3. Real-time languages criteria	<ul style="list-style-type: none"> <li>• CSF, real-time Ada, VAVOC-X</li> </ul>
1.4. Examples of actual real-time languages	<ul style="list-style-type: none"> <li>• Examples: fast real-time Ada, VAVOC-X</li> </ul>
<b>2. Physical coupling</b>	<ul style="list-style-type: none"> <li>• Complex physical phenomena</li> <li>• Measuring temperature</li> <li>• Thermocouples, thermometers, noise, temperature measurement and others</li> <li>• Measuring range and relative speed</li> <li>• Interferometry, time of flight, intensity, Doppler methods, interferometry</li> <li>• Examples:           <ul style="list-style-type: none"> <li>• Time-of-flight ultrasound time-of-flight laser Doppler current profiler</li> <li>• Self-tearing timing requirements</li> <li>• Real-time light and complex systems approach</li> </ul> </li> </ul>
<b>3. Converters &amp; Interfaces</b>	<ul style="list-style-type: none"> <li>• Analog signal chain in a field system</li> <li>• Sampling data aliasing, Nyquist criterion, oversampling</li> <li>• Quantization (LSB, noise voltage, SNR, INOB), missing codes, DNL, SNL</li> <li>• A/D converters, alias problems</li> <li>• Examples:           <ul style="list-style-type: none"> <li>• Fast and simple A/D converter example</li> <li>• Anti-aliasing A/D data logging</li> </ul> </li> </ul>
3.1. Flash, SAR, 2-dith order 2-D	<ul style="list-style-type: none"> <li>• Flash, SAR, 2-dith order 2-D</li> </ul>
3.2. ADC converter: Flash, pipelined	<ul style="list-style-type: none"> <li>• ADC converter: Flash, pipelined</li> </ul>
3.3. Examples:	<ul style="list-style-type: none"> <li>• Fast and simple A/D converter example</li> <li>• Anti-aliasing A/D data logging</li> </ul>
3.4. Anti-aliasing A/D data logging	<ul style="list-style-type: none"> <li>• Anti-aliasing A/D data logging</li> </ul>
<b>4. Time &amp; Space</b>	<ul style="list-style-type: none"> <li>• What is time? / What is embodiment?</li> <li>• Approaches by different faculties to understand the basis for this course</li> <li>• Interacting with time</li> <li>• Formulating local time-dependent constraints - Access time delay processes, detect timeout in different languages</li> <li>• Specifying timing requirements</li> <li>• Formulating global timing constraints - Understanding time-synchronization in different languages</li> <li>• Selective accepts, selective calls</li> <li>• Indeterminism in message-based synchronization</li> </ul>
4.1. What is time?	<ul style="list-style-type: none"> <li>• What is time? / What is embodiment?</li> <li>• Approaches by different faculties to understand the basis for this course</li> <li>• Interacting with time</li> <li>• Formulating local time-dependent constraints - Access time delay processes, detect timeout in different languages</li> <li>• Specifying timing requirements</li> <li>• Formulating global timing constraints - Understanding time-synchronization in different languages</li> <li>• Selective accepts, selective calls</li> <li>• Indeterminism in message-based synchronization</li> </ul>
4.2. Interacting with time	<ul style="list-style-type: none"> <li>• What is time? / What is embodiment?</li> <li>• Approaches by different faculties to understand the basis for this course</li> <li>• Interacting with time</li> <li>• Formulating local time-dependent constraints - Access time delay processes, detect timeout in different languages</li> <li>• Specifying timing requirements</li> <li>• Formulating global timing constraints - Understanding time-synchronization in different languages</li> <li>• Selective accepts, selective calls</li> <li>• Indeterminism in message-based synchronization</li> </ul>
4.3. Specifying timing requirements	<ul style="list-style-type: none"> <li>• What is time? / What is embodiment?</li> <li>• Approaches by different faculties to understand the basis for this course</li> <li>• Interacting with time</li> <li>• Formulating local time-dependent constraints - Access time delay processes, detect timeout in different languages</li> <li>• Specifying timing requirements</li> <li>• Formulating global timing constraints - Understanding time-synchronization in different languages</li> <li>• Selective accepts, selective calls</li> <li>• Indeterminism in message-based synchronization</li> </ul>
4.4. Selective timing requirements	<ul style="list-style-type: none"> <li>• What is time? / What is embodiment?</li> <li>• Approaches by different faculties to understand the basis for this course</li> <li>• Interacting with time</li> <li>• Formulating local time-dependent constraints - Access time delay processes, detect timeout in different languages</li> <li>• Specifying timing requirements</li> <li>• Formulating global timing constraints - Understanding time-synchronization in different languages</li> <li>• Selective accepts, selective calls</li> <li>• Indeterminism in message-based synchronization</li> </ul>
<b>5. Asynchronism</b>	<ul style="list-style-type: none"> <li>• Interrupts, Signals</li> <li>• Device / system / language / operating system level interrupt control</li> <li>• Characteristics of interrupts and signals</li> <li>• Exception classes / granularity</li> <li>• Exception handling, parameterisation, propagation, synchronization, language issues</li> </ul>
5.1. Interrupts, Signals	<ul style="list-style-type: none"> <li>• Interrupts, Signals</li> </ul>
5.2. Device / system / language / operating system level interrupt control	<ul style="list-style-type: none"> <li>• Device / system / language / operating system level interrupt control</li> </ul>
5.3. Characteristics of interrupts and signals	<ul style="list-style-type: none"> <li>• Characteristics of interrupts and signals</li> </ul>
5.4. Exception classes / granularity	<ul style="list-style-type: none"> <li>• Exception classes / granularity</li> </ul>
5.5. Exception handling, parameterisation, propagation	<ul style="list-style-type: none"> <li>• Exception handling, parameterisation, propagation</li> </ul>
5.6. Language issues	<ul style="list-style-type: none"> <li>• Language issues</li> </ul>
<b>6. Synchronization</b>	<ul style="list-style-type: none"> <li>• Shared memory based synchronization           <ul style="list-style-type: none"> <li>• Files, condition variables &amp; semaphores, conditional critical regions, monitors, protected objects.</li> <li>• Guard evaluation times, needed monitor calls, deadlocks, simultaneous reading, queue management, blocking operations and re-blocking</li> </ul> </li> <li>• Message based synchronization           <ul style="list-style-type: none"> <li>• Synchronization models: addressing modes, message structures</li> <li>• Selective accepts, selective calls</li> <li>• Indeterminism in message-based synchronization</li> </ul> </li> </ul>
6.1. Shared memory based synchronization	<ul style="list-style-type: none"> <li>• Shared memory based synchronization           <ul style="list-style-type: none"> <li>• Files, condition variables &amp; semaphores, conditional critical regions, monitors, protected objects.</li> <li>• Guard evaluation times, needed monitor calls, deadlocks, simultaneous reading, queue management, blocking operations and re-blocking</li> </ul> </li> </ul>
6.2. Message based synchronization	<ul style="list-style-type: none"> <li>• Message based synchronization           <ul style="list-style-type: none"> <li>• Synchronization models: addressing modes, message structures</li> <li>• Selective accepts, selective calls</li> <li>• Indeterminism in message-based synchronization</li> </ul> </li> </ul>
<b>7. Scheduling</b>	<ul style="list-style-type: none"> <li>• Basic real-time scheduling           <ul style="list-style-type: none"> <li>• Deadlines, faults, errors, failures - Reliability</li> <li>• Fault avoidance, removal, prevention, fault tolerance</li> </ul> </li> <li>• Redundancy           <ul style="list-style-type: none"> <li>• Static TMR, SNBR and dynamic redundancy</li> <li>• Redundancy in software design</li> </ul> </li> <li>• Periodic, sporadic, soft real-time tasks - Deadlines shorter than period - Cooperative and deferred preemption scheduling - Fault tolerance in terms of description, handling, detection, reduction, Synchonized task delivery</li> </ul>
7.1. Basic real-time scheduling	<ul style="list-style-type: none"> <li>• Basic real-time scheduling           <ul style="list-style-type: none"> <li>• Deadlines, faults, errors, failures - Reliability</li> <li>• Fault avoidance, removal, prevention, fault tolerance</li> </ul> </li> </ul>
7.2. Redundancy	<ul style="list-style-type: none"> <li>• Redundancy           <ul style="list-style-type: none"> <li>• Static TMR, SNBR and dynamic redundancy</li> <li>• Redundancy in software design</li> </ul> </li> </ul>
7.3. Periodic, sporadic, soft real-time tasks	<ul style="list-style-type: none"> <li>• Periodic, sporadic, soft real-time tasks - Deadlines shorter than period - Cooperative and deferred preemption scheduling - Fault tolerance in terms of description, handling, detection, reduction, Synchonized task delivery</li> </ul>
<b>8. Resource control</b>	<ul style="list-style-type: none"> <li>• Resource synchronization primitives           <ul style="list-style-type: none"> <li>• Real-time criterion for resource usage               <ul style="list-style-type: none"> <li>• Ada, POSIX static, off-line analysis mostly - RTJava, Concurrency and dynamic scheduling</li> </ul> </li> </ul> </li> <li>• Resource reclining schemes           <ul style="list-style-type: none"> <li>• Real-time reclining only, start and end times, vector algorithms</li> <li>• Resource reclining with task migration</li> </ul> </li> <li>• Policy and run-time issues to be considered</li> </ul>
8.1. Resource synchronization primitives	<ul style="list-style-type: none"> <li>• Resource synchronization primitives           <ul style="list-style-type: none"> <li>• Real-time criterion for resource usage               <ul style="list-style-type: none"> <li>• Ada, POSIX static, off-line analysis mostly - RTJava, Concurrency and dynamic scheduling</li> </ul> </li> </ul> </li> </ul>
8.2. Resource reclining schemes	<ul style="list-style-type: none"> <li>• Resource reclining schemes           <ul style="list-style-type: none"> <li>• Real-time reclining only, start and end times, vector algorithms</li> <li>• Resource reclining with task migration</li> </ul> </li> </ul>
8.3. Real-time resource control	<ul style="list-style-type: none"> <li>• Real-time resource control           <ul style="list-style-type: none"> <li>• Policy and run-time issues to be considered</li> </ul> </li> </ul>
<b>9. Reliability</b>	<ul style="list-style-type: none"> <li>• Terminology           <ul style="list-style-type: none"> <li>• Faults, Errors, Failures - Reliability</li> <li>• Fault avoidance, removal, prevention, fault tolerance</li> </ul> </li> </ul>
9.1. Terminology	<ul style="list-style-type: none"> <li>• Terminology           <ul style="list-style-type: none"> <li>• Faults, Errors, Failures - Reliability</li> <li>• Fault avoidance, removal, prevention, fault tolerance</li> </ul> </li> </ul>
9.2. Faults	<ul style="list-style-type: none"> <li>• Faults           <ul style="list-style-type: none"> <li>• Basic fault types</li> <li>• Faults with Rate Monitoring (RMOD), Deadline Monotonic Priority Ordering (DMPQ)</li> <li>• Earliest Deadline First (EDF)</li> </ul> </li> </ul>
9.3. Redundancy	<ul style="list-style-type: none"> <li>• Redundancy           <ul style="list-style-type: none"> <li>• Static TMR, SNBR and dynamic redundancy</li> <li>• Redundancy in software design</li> </ul> </li> </ul>
9.4. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.5. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.6. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.7. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.8. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.9. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.10. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.11. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.12. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.13. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.14. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.15. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.16. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.17. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.18. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.19. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.20. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.21. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.22. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.23. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.24. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.25. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.26. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.27. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.28. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.29. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.30. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>
9.31. Redundancy & Fault tolerance	<ul style="list-style-type: none"> <li>• Redundancy and fault tolerance           <ul style="list-style-type: none"> <li>• Redundancy in software design</li> <li>• Redundancy in hardware design</li> </ul> </li> </ul>

## Summary

### Converters & Interfaces

#### • Analogue signal chain in a digital system

- Sampling data, aliasing, Nyquist's criterion, oversampling
- Quantization (LSB, rms noise voltage, SNR, ENOB), Missing codes, DNL, INL

#### • A/D converters:

- Integrating (Single- / Dual-slope), Flash, Pipelined, SAR, Tracking,  $\Sigma\Delta$ ,  $\Sigma\Delta$  DDA, n-th order  $\Sigma\Delta$ .

#### • Examples:

- Fast and simple A/D converter example: National Semiconductor ADC08200
- Multi-channel A/D data logging interface example: National Semiconductor LM12L458
- Simple 8-bit µ-controller example: Motorola MC68HC05, Propeller.
- Complex 32-bit µ-controller examples: AVR32 and Motorola MPC555 (including TPUs).

#### • General device handling / sampling control / language requirements

© 2019 Uwe R. Zimmer, The Australian National University  
page 954 of 961 (chapter 10: "Summary" - up to page 961)

## Summary

### Asynchronism

#### • Interrupts / Signals

- Device / system / language / operating-system level interrupt control.
- Characteristics of interrupts and signals.

#### • Exceptions

- Exception classes / granularity / parametrisation / propagation.
- Resumption and termination, specific language issues.

#### • Atomic Actions

- Definition / requirements / failure cases / implementation / error recovery.
- Addressing modes
- Message structures
- Examples

#### • Asynchronous transfer of control / Interrupts in context

- Interrupts and ATC in real-time Java and Ada.

© 2019 Uwe R. Zimmer, The Australian National University  
page 956 of 961 (chapter 10: "Summary" - up to page 961)

## Summary

### Time & Space

#### • What is time? / What is embodiment?

- Approaches by different faculties to understand the foundations of this course

#### • Interfacing with time

- Formulating local, time-dependent constraints
- Access time, delay processes, timers
- Timeouts, asynchronous transfer of control

#### • Specifying timing requirements

- Formulating global timing-constraints
- Understanding time-scope parameters (and expressing them in different languages)
- Satisfying timing requirements
- Real-time logic approach & Complex systems approach

© 2019 Uwe R. Zimmer, The Australian National University  
page 955 of 961 (chapter 10: "Summary" - up to page 961)

## Summary

### Synchronization

#### • Shared memory based synchronization

- Flags, condition variables, semaphores, conditional critical regions, monitors, protected objects.
- Guard evaluation times, nested monitor calls, deadlocks, simultaneous reading, queue management.
- Synchronization and object orientation, blocking operations and re-queuing.

#### • Message based synchronization

- Synchronization models
- Addressing modes
- Message structures
- Examples

© 2019 Uwe R. Zimmer, The Australian National University  
page 957 of 961 (chapter 10: "Summary" - up to page 961)

**Summary**

## Scheduling

- **Basic real-time scheduling**
  - Fixed Priority Scheduling (FPS) with Rate Monotonic (RMP) and Deadline Monotonic Priority Ordering (DMPO).
  - Earliest Deadline First (EDF).
- **Real-world extensions**
  - Aperiodic, sporadic, soft real-time tasks.
  - Deadlines different from period.
  - Synchronized tasks (priority inheritance, priority ceiling protocols).
  - Cooperative and deferred pre-emption scheduling.
  - Fault tolerance in terms of exception handling considerations.
- **Language support**
  - Ada, POSIX

© 2019 Uwe R. Zimmer, The Australian National University  
page 958 of 961 (chapter 10, "Summary" up to page 961)

**Summary**

## Resource Control

- **Resource synchronization primitives**
  - Evaluation criteria for resource synchronization methods.
  - Atomicity, liveliness, and double interaction.
- **Resource reclaiming schemes**
  - Basic reclaiming
  - Early start algorithm
  - Restriction vector
  - Resource reclaiming with task migration
- **Real-time resource control**
  - Policy and run-time issues to be considered.

© 2019 Uwe R. Zimmer, The Australian National University  
page 959 of 961 (chapter 10, "Summary" up to page 961)

**Summary**

## Reliability

- **Terminology**
  - Faults, Errors, Failures – Reliability.
- **Faults**
  - Fault avoidance, removal, prevention,  $\leftrightarrow$  Fault tolerance.
- **Redundancy**
  - Static (TMR, NMR) and dynamic redundancy.
  - N-version programming and dynamic redundancy in software design.
- **Reduce & Formalise**
  - Ravenscar profile.
  - Real-time logic.
